HOW TO PROPERLY POSITION YOUR TRUCK'S MIRRORS

When you drive your vehicle, you need to be able to see the sides and back. To do this, you can place your truck's mirrors in the proper positions. Here's how to properly position your truck's mirrors.

Step 1: Clean the Mirrors

Before you adjust your mirrors, make sure that they're clean. When you let your mirrors remain covered in dirt or grime, you won't be able to see around your vehicle well. You can use a lint-free cloth and cleaner to wipe your mirrors thoroughly.

Step 2: Adjust Your Rearview Mirror

After you clean all your mirrors, it's time to adjust your truck's rearview mirror. Luckily, this mirror is easy to move by hand, so this should only take a couple of seconds. Move the mirror until you can see the road behind your car while sitting comfortably in the driver's seat. You should also be able to see the horizon line in the mirror and the entire rear window.

Step 3: Adjust Your Side Mirrors

While the second step helps you adjust your rearview mirror, this step helps adjust your truck's side mirrors. To do this, sit in the driver's seat in a standard relaxed position. Then, move the mirrors horizontally until the side corners of your truck are barely visible. You should be able to see the road behind and around your vehicle. This will allow you to view any traffic around clearly.

Step 4: Test the New Positions

If you completed the first three steps, your mirrors should be in the proper position. However, before you go on the road, it's always best to test the new positions. Sit in the driver's seat and see if the new mirrors are easy to use and provide plenty of visibility. Another way to test the mirrors is to back out of a parking spot carefully. While doing this, you can see if they provide adequate visibility.

And that's how to properly position your truck's mirrors. Placing your mirrors in the correct positions will ensure your safety and the safety of others. If you need to replace your vehicle's mirror with a new one or another type, visit **SME's** website and contact the **Safety Mirror Experts** in the Turkish factory with 55 years of experience.
