KEY POINTS: WHAT TO KNOW ABOUT TRUCK MIRRORS

- Truck mirrors should be a system that allows you maximum visibility behind and around you
- Although factory mirrors are good quality, those alone do not provide optimal vision while on the road
- 2020, blind spot, convex, west coast and other mirrors can be additional ways to make sure you have the clearest field of vision behind and around your truck
- It's important to adjust mirrors before your journey and check periodically to make sure they stay in proper alignment throughout your trip

With its 55 years of experience, SME manufactures the highest quality mirrors for your safety in Turkey. Get in touch with our Safety Mirror Experts for your inquiries.
